

NBnano

The **NBnano** is a LoRaWAN management system that brings the IoT world into the Automation, Energy Management and Building Management System.

Translate any **LoRaWAN** sensor into **BACnet**, **ModBus** or **MQTT**.

○ Product Features

- ModBus, BACnet, MQTT and API interfaces
- Configure alerts & notifications
- Sensor data visualization and exporting
- Local data storage
- Remote access via VPN

○ Advantages

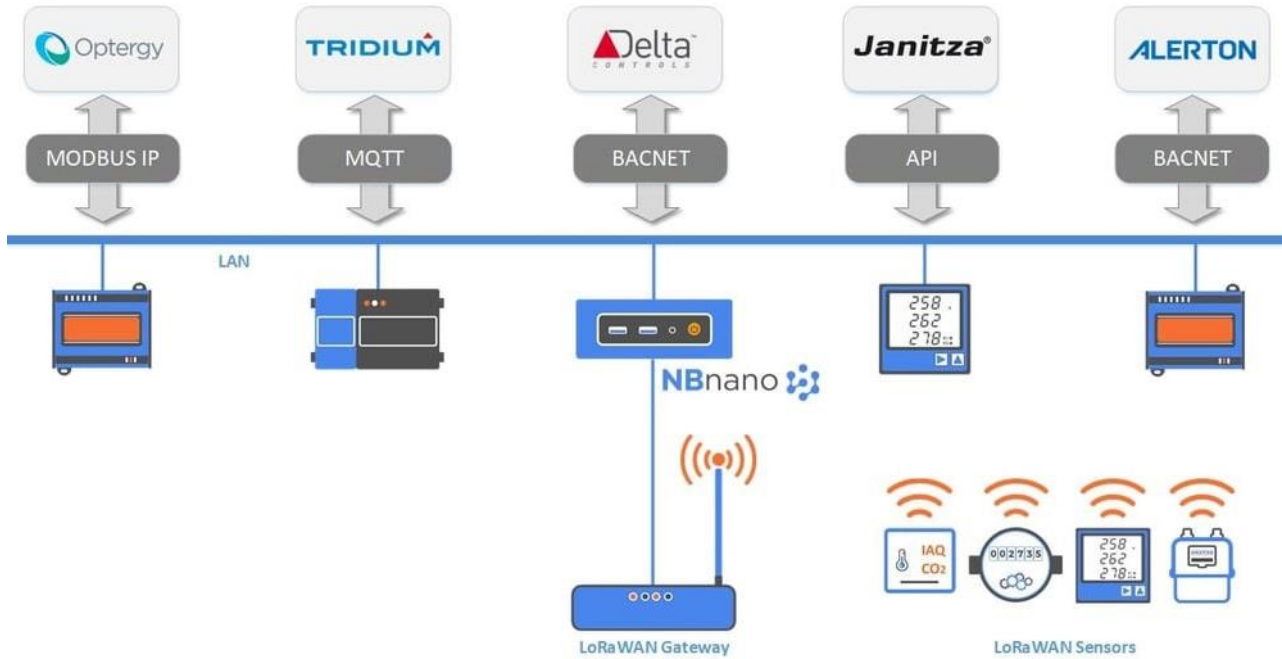

- Cost effective solution
- Only one NBnano is required per installation
- Flexible deployment of gateways
- Bring data from multiple protocols into a single unified data stream

LoRaWAN™

Senticon
SENTIENT CONTROL SOLUTIONS

○ Main Applications

- Building Automation
- Energy Management
- Analytics
- HVAC Optimization
